

For potential grant applications, including “The Sprout Fund”

March 29, 2016

I am Max Schafer. I am an educator in Los Angeles. I am head of the Livecode Educational Outreach in the United States and online. I run the “Livecode for Students” page in Facebook. I offer teacher workshops in Livecode and other educational topics around the world.

I would like to endorse the efforts of Mark Rauterkus. Mark has been involved in the Livecode community for many years. He has great enthusiasm and support for Livecode integration into Education. He has an active voice in the Livecode online community, and has the support of the entire group.

I have just completed teaching a course in programming for High School students at iLead Charter school in Los Angeles. Livecode is free for schools and it is the best, easiest, most powerful programming language for students. LiveCode provides plenty of opportunities for student learners to actively produce, create, experiment and design their own apps.

Livecode brings students to learning at the highest levels of Common Core, the application level. My fifth grade students have won Digital Voice awards in 2014, and their apps are now available around the world.

Sincerely yours,
Max Schafer
